Appl. No.: 10/809,053

Preliminary Amdt. Dated August 5, 2004

5

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in this application.

10

20

1. (Currently Amended) A light control element being equipped with a base plate that has an electrooptic effect, an optical guide and an electrode for modulation that are formed on said base plate, which has ridge structure, wherein:

an anti-DC drift layer is installed on the a surface of the above mentioned base plate 15 where the optical guide is formed; and

annealing treatment is performed after ridge processing.

- 2. A light control element as claimed in claim 1, wherein: (Original) said anti-DC drift layer is formed by doping anti-drift materials from said base plate.
- 3. (Original) A light control element as claimed in claim 2, wherein: said anti-drift materials consist of MgO or ZnO.
- 4. (Currently Amended) A light control element as claimed in claims 2 and 3 claim 2, wherein:

said anti-drift materials consist of MgO or ZnO; and

the <u>a</u> dope amount of said anti-drift materials accounts for $0.5\sim7$ mole % of said base plate.

- 5. (Currently Amended) A light control element as claimed in claims 1 to 4 claim 1, wherein:
- 5 the-thickness of said anti-DC drift layer is more than 0.5μ m from the surface toward inside of the base plate.
 - 6. (New) A light control element as claimed in claim 2, wherein:

thickness of said anti-DC drift layer is more than $0.5 \mu m$ from the surface toward inside of the base plate.

10 7. (New) A light control element as claimed in claim 3, wherein:

thickness of said anti-DC drift layer is more than $0.5 \mu m$ from the surface toward inside of the base plate.

8. (New) A light control element as claimed in claim:4, wherein:

thickness of said anti-DC drift layer is more than $0.5\mu m$ from the surface toward inside of the base plate.
